List of Figures

- 1. 36 Button LCD Control Panel 1
- 2. 72 Button LCD Control Panel 1

The embedded Linux operating system driving the LCD panel accommodates any custom software packages and can communicate using any TCP/IP-based communication protocol.

DESCRIPTION

Each button on the LCD Control Panel can be programmed with unique text and color based on the status and location in the playlist. As the playlist moves from event to event, the button can change such that it controls the devices and server channels that are enabled at that time.

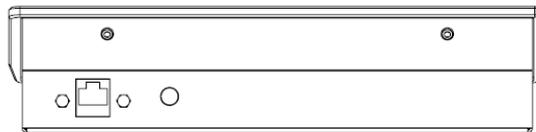

Capabilities of the LCD Control panel:

- Manual playout control of up to five videosever or CG channels in ASTRA News. Control buttons change colors based on current status.
- Automated live news production with ASTRA Studio for control of multiple devices such as graphics, mix effects, camera robotics, and videosever channels.
- Programmable to any user's requests.

TECHNICAL SPECIFICATIONS

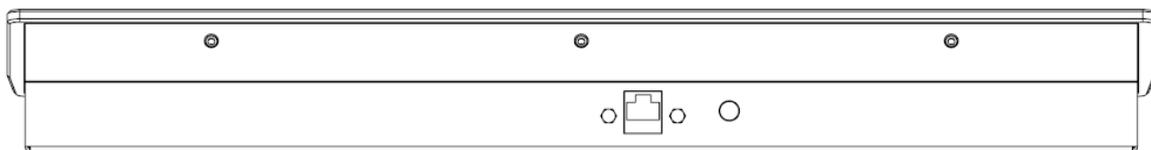

Connectivity	
Power Connector	Power jack with lock
Control Interface	RJ45, 1000Mbps Ethernet
Communication protocol	TCP/IP Port No. 6000
Power	
Power Supply	SYS1548-6524-T2, 24VDC/65W (positive polarity)
Power Consumption	Max. 15W

36 BUTTON LCD CONTROL PANEL

Physical	
Weight	1.2kg
Dimensions(mm)	262x150x65 (WxDxH)

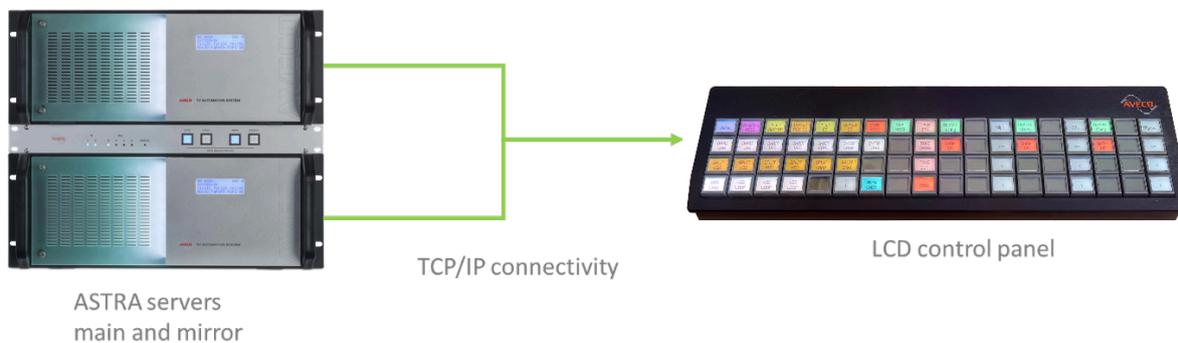

72 BUTTON LCD CONTROL PANEL

Physical	
Weight	2.2kg
Dimensions(mm)	448x141x58 (WxDxH)

ARCHITECTURE

The LCD Control Panel communicates with Aveco's ASTRA automation servers via Ethernet and TCP/IP protocol. The panel must have the IP address assigned and this IP address shall then be configured in the relevant automation servers, as well.

In terms of redundancy, the ASTRA server which is currently active communicates with the LCD Control panel.

INSTALLATION

HARDWARE

This is a desktop free-standing panel, thus it only needs to be placed at the proper place with power and Ethernet connected.

SOFTWARE

Access to the panel setup is via the MENU button. The setup is self-explanatory and allows setting the following parameters:

- IP address (default 192.168.1.33)
- Gateway (default 192.168.1.1)
- Netmask (default 255.255.255.0)

Please make sure:

- The configuration of main and mirror ASTRA servers include the IP address of the control panel.
- The main and mirror ASTRA servers can freely communicate with the panel by TCP/IP over your network.
